Delineation and quantification of wetland depressions in the Prairie Pothole Region of North Dakota

[Q Wu](#), [CR Lane](#) - *Wetlands*, 2016 - Springer

Abstract The Prairie Pothole Region of North America is characterized by numerous, small, wetland depressions that perform important ecological and hydrological functions. Recent studies have shown that total wetland area in the region is decreasing due to cumulative

Determining Murder Prone Areas Using Modified Watershed Model

[J Khisha](#), [N Zerim](#), [D Ghoshdhury](#)... - *Conference on ...*, 2017 - Springer

Abstract In this paper, we present an algorithm for cluster detection using modified Watershed model. The presented model for cluster detection works better than the k-means algorithm. The proposed algorithm is also computationally inexpensive compared to the k-

Bubble size statistics during reionization from 21-cm tomography

[SK Giri](#), [G Mellema](#), [KL Dixon](#), [IT Iliev](#) - *arXiv preprint arXiv:1706.00665*, 2017 - arxiv.org

Abstract: The upcoming SKA1-Low radio interferometer will be sensitive enough to produce tomographic imaging data of the redshifted 21-cm signal from the Epoch of Reionization. Due to the non-Gaussian distribution of the signal, a power spectrum analysis alone will not

Real-time part detection in a virtually machined sheet metal defined as a set of disjoint regions

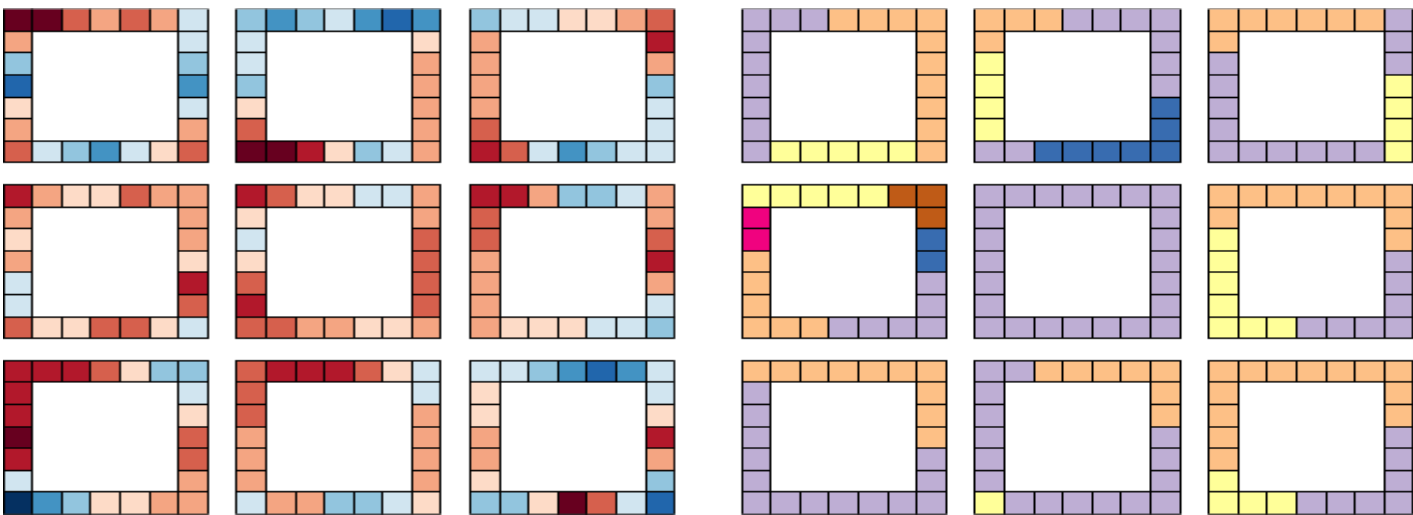

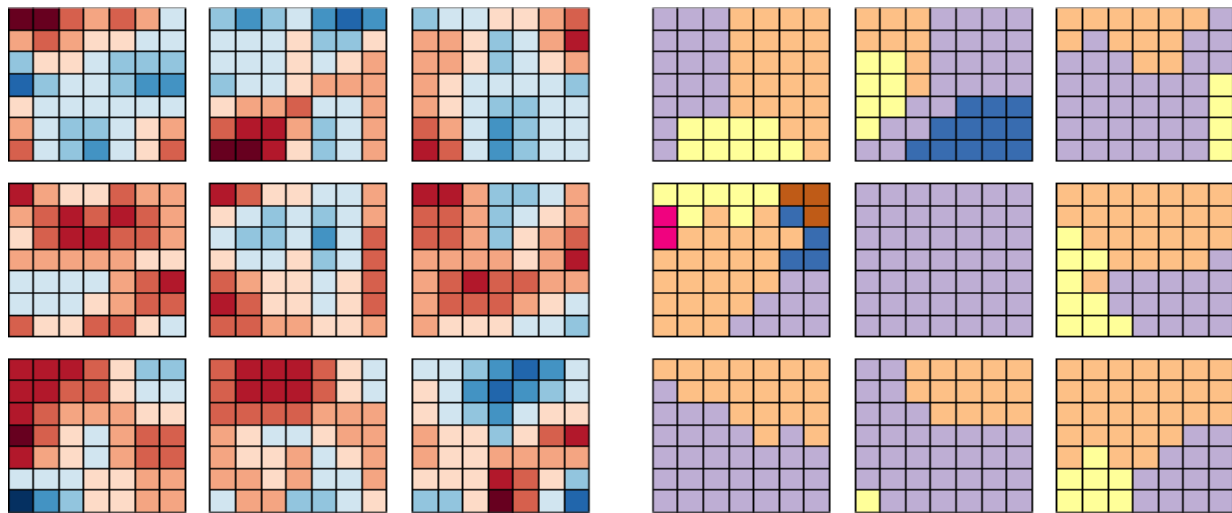

[G Velez](#), [A Moreno](#), [Á Ruíz De Infante...](#) - International Journal of ..., 2016 - Taylor & Francis

In sheet metal machining process, it is of extreme importance to be able to detect cut parts, differentiating the blank and processed elements. When the parts are cut from the rest of the sheet, such elements are prone to move freely and may jump or cause damage to the

What about CPUs?

PGI-trs <trs@pgroup.com>  Jan 2, 2018, 6:03 PM

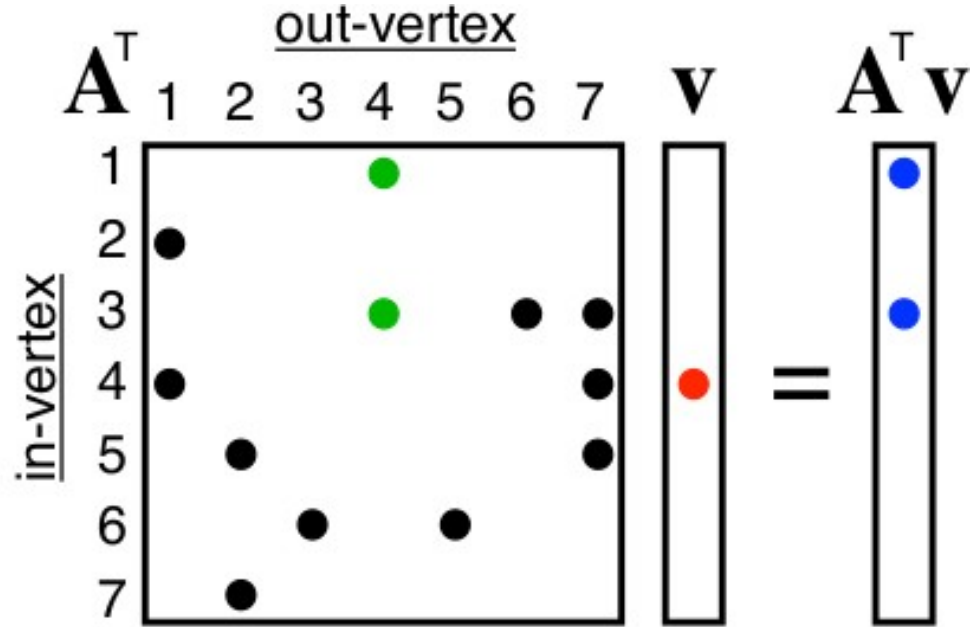

to me ▾

Thanks Richard. I was able to reproduce the error on both x86 and Power using a P100.

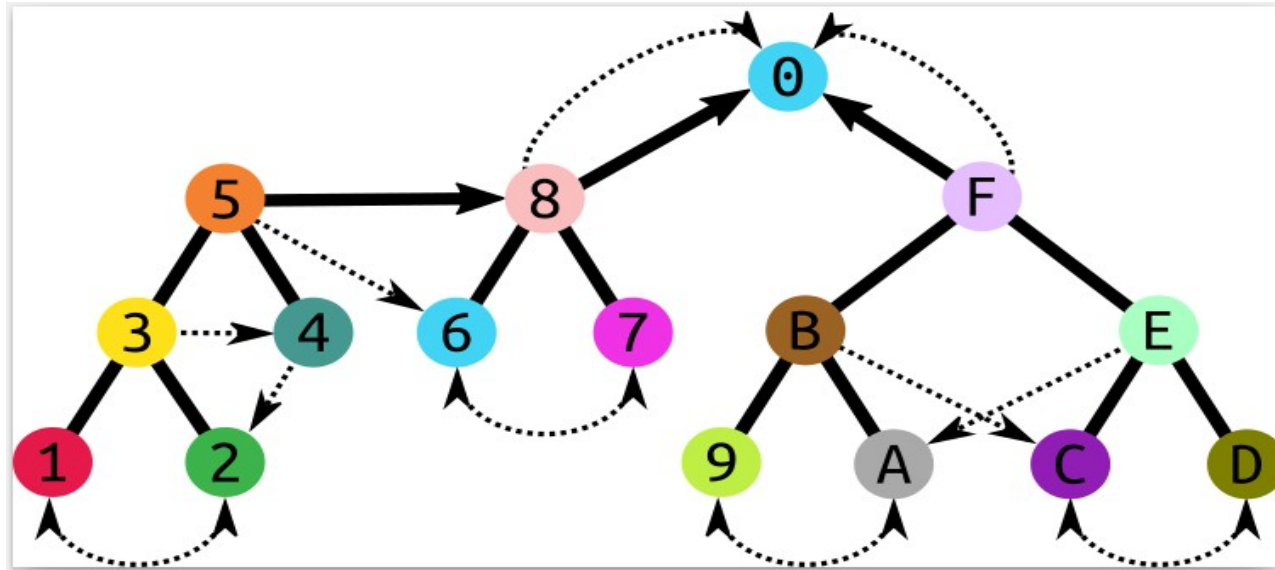

From what I can tell it looks like a compiler bug. The problem seems to be with the variables "level_top" and "level_bottom". For some reason they're getting bad values making the loop trip count be 0 (i.e. the loop isn't getting executed and why nstack isn't getting updated). I've reported the bug to our engineers as TPR#25056.
